Pollution

\* Pollution is the introduction of harmful materials into the environment. These harmful materials are called pollutants. pollutants can be natural such as volcanic ash. They can also be created by human activity, such as trash or runoff produced by factories, pollutants damage the quality of air, water and land.

definition of pollution

pollution is the introduction of harmful materials into the environment.

Types of pollution

Air pollution

Water pollution

land pollution

## \* Air Pollution

Air pollution is the contamination of air due to the presence of substances in the atmosphere that are harmful to the health of humans and other living beings, or cause damage to the climate or to materials. There are many different types of air pollutants, such as gases, particulates, and biological molecules.

Air pollution is a mixture of solid particles and gases in the air. Car emissions, chemicals from factories, dust, pollen, and mold spores may be suspended as particles. Ozone, a gas, is a major part of air pollution in cities. When ozone forms air pollution it's also called smog. Some air pollutants are poisonous.

## Causes of Air Pollution

Air pollution is caused by solid and liquid particles and certain gases that are suspended in the air. These particles and gases can come from car and truck exhaust, factories, dust, pollen, mold spores, volcanoes, and wildfires. The solid and liquid particles suspended in our air are called aerosols.

## Effects of Air pollution.

Air pollution consists of chemicals or particles in the air that can harm the health of humans, animals and plants, it also damages buildings. Pollutants in the air take many forms. They can be gases, solid particles, or liquid droplets, sources of Air pollution.

## Air pollution control

### 10 Best ways to Reduce Air pollution

1. Using public transports.
2. Turn off the lights when not in use.
3. Recycle and Reuse.
4. No to plastic bags.
5. Reduction of forest fires and smoking.
6. Use of fans instead of Air conditioner.
7. Use filters for chimneys.
8. Avoid usage of crackers.

## Noise / Sound Pollution.

• What is pollution?

The presence of harmful substance in environment is called pollution. this damage to ecosystem.

Different types of pollution are

- Air pollution.
- Water pollution
- Soil pollution.
- Radiation pollution
- Noise pollution.

Noise is the recently added dimension to environmental pollution.

What is Noise pollution?

Noise pollution is the disturbing and unwanted noise. Too many people, too many machines making Noise have caused a rising awareness of Noise pollution in India. When something vibrates, sound is produced. Sound is form of energy. Sound is measured in units called decibels (dB).

## • Causes of Noise pollution.

- 1) Traffic Noise
- 2) Air craft Noise
- 3) Noise from constructions sites.
- 4) Noise from industries.
- Noise from other sources.

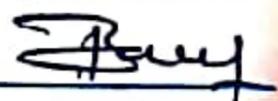

## • Effect of Noise pollution.

Noise beyond 90 to 120 dB is having a health hazard.

- Today's the most common health problem of human hearing loss. As well as hearing loss rise in students, child's.
- excessive noise reduces the ability to hear lessons clearly and has a negative effect on ability to learn. and other effect is
- High Blood pressure.
  - Stress
  - Sleep disturbance.
  - Colour blindness.
